

General

This is a Xbase++ Class for easy the use of LibXL.DLL

You will find the method list in the source code. Documentation and help for LibXL is on the LibXL homepage www.libxl.com . The C++ dokumetation suites best for parameters, because of the parameter type and count. The method names are build with the C++ class name and function names, because of some reserved words in Xbase++.

C++ class book, funktion load => method BookLoad of class xlBook.

You can use hHandle (hBookHandle) or objects (oBook from xlBook class) as parameters the method will handle that. If a function in LibXL will return a handle (hBook, hSheet etc.) these methodes deliver a Object (oBook, oSheet), so easy to use.

Examples

There are Test*.PRG, look inside what is tested, you can send my new short examples if you want.

Warranty

I am NOT responsible for any code or damage.

What you need

- Xbase++ 1.90.x or newer
- OT4XB.DLL from www.xbwin.com
- LibXL.DLL from www.LibXL.com

Versions

- 1.00 - LibXL 3.5.3 from 2013-12-04
First release, not all is tested, but I did not find errors inside.
- 1.01 - LibXL 3.5.3 from 2014-01-17
Some minor error removed (miss typing words, variable names etc.).
Test2.PRG enhanced with a formula example => function names like in VB-macros !
- 1.10 - LibXL 3.6.1.1 from 2015-11-27
 - xlCreateXLSXBook(cName,cKey) no macros
 - xlCreateXLSMBook(cName,cKey) macros can be inside.
